

Ideation Phase

Empathize & Discover

Date	03 October 2026
Team ID	SWTID-2026-2035
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

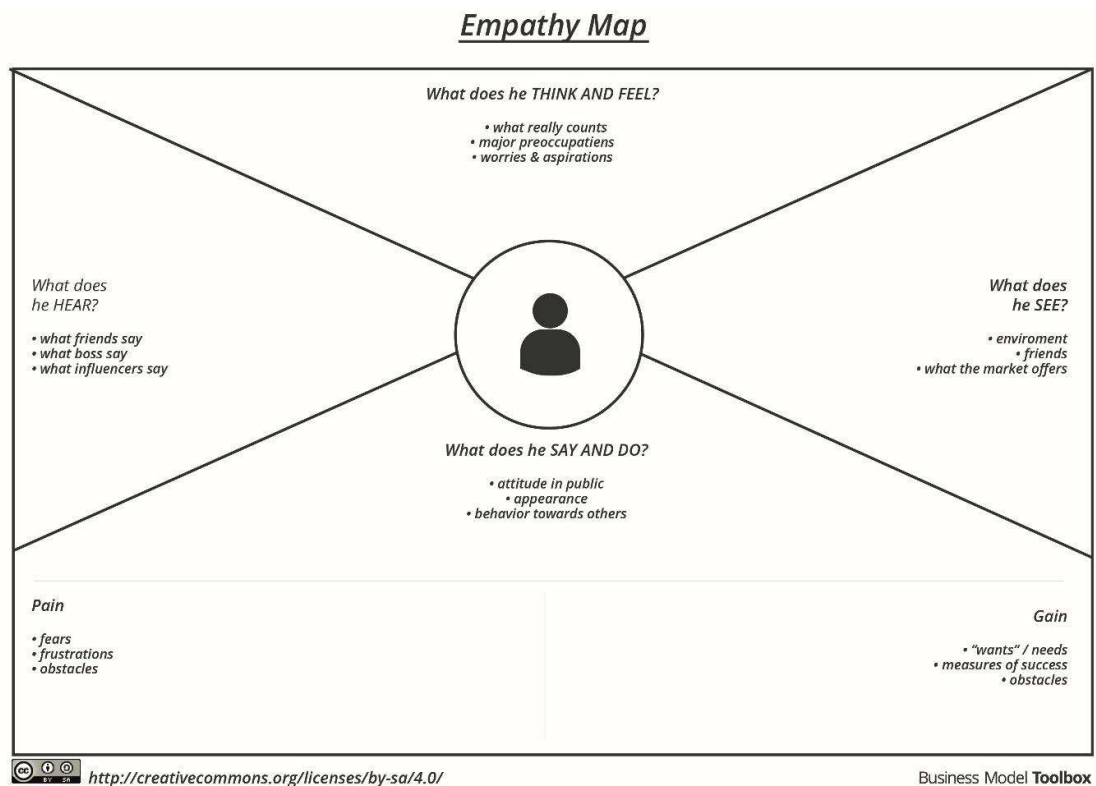

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Example:

Empathy Area	Team Observation
THINK & FEEL	Wants incident updates to be accurate, fast, and predictable; worries that incomplete or invalid data may pass through.
HEAR	Guidance from service-desk processes, team members, and system prompts about required incident information.

SEE	Incident forms and lists with fields such as Urgency and Assignment Group, plus validation messages and field behavior.
SAY & DO	Creates or updates incidents, changes field values, saves forms, and may edit records directly from lists.
PAIN	Inconsistent validation, unnecessary rework, confusing field behavior, and risk of incomplete incident records.
GAIN	Clear field rules, immediate feedback, reliable save validation, controlled list edits, and consistent incident data.
