

**Project Design Phase-II**  
**Solution Requirements (Functional & Non-functional)**

|               |                                                |
|---------------|------------------------------------------------|
| Date          | 03 October 2026                                |
| Team ID       | SWTID-2026-2035                                |
| Project Name  | Implement Client Script & UI Policy (Incident) |
| Maximum Marks | 4 Marks                                        |

**Functional Requirements:**

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task)                                                                                                                          |
|--------|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FR-1   | Incident Client Script        | Configure Client Script for the Incident form<br>Client-side field validation / behavior<br>Test the configured script on Incident records                  |
| FR-2   | Incident UI Policy            | Configure UI Policy conditions<br>Configure UI Policy Actions for field visibility, mandatory, or read-only behavior<br>Test the policy on Incident records |
| FR-3   | Incident Form Validation      | Apply the configured rules during Incident creation and update<br>Prevent invalid or incomplete data where the rule requires it                             |
| FR-4   | Verification & Evidence       | Execute functional tests for Client Script and UI Policy<br>Capture screenshots showing the configured behavior                                             |
|        |                               |                                                                                                                                                             |
|        |                               |                                                                                                                                                             |

**Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

| FR No. | Non-Functional Requirement | Description                                                                                                                          |
|--------|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| NFR-1  | Usability                  | Incident form rules should provide clear, immediate behavior to the ServiceNow user with minimal extra interaction.                  |
| NFR-2  | Security                   | Use ServiceNow roles, permissions, and platform security controls so only authorized users can configure or administer the solution. |
| NFR-3  | Reliability                | Client Script and UI Policy behavior should execute consistently on the intended Incident form events and conditions.                |
| NFR-4  | Performance                | Client-side rules should execute quickly and avoid unnecessary server calls for simple form behavior.                                |
| NFR-5  | Availability               | The solution runs within the ServiceNow platform and is available when the ServiceNow instance is available.                         |
| NFR-6  | Scalability                | The configuration should support additional Incident form rules and fields without requiring a separate application server.          |
