

Project Design Phase-II Technology Stack (Architecture & Stack)

Date	03 October 2026
Team ID	SWTID-2026-2035
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

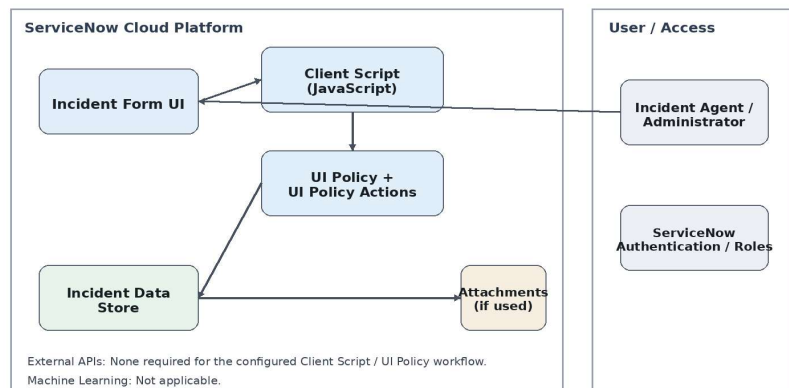

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Project-specific ServiceNow Incident architecture

Reference: [ServiceNow platform architecture \(project-specific\)](#)

Technical Architecture - ServiceNow Incident Configuration

Guidelines:

- Include all the processes (As an application logic / Technology Block)
- Provide infrastructural demarcation (Local / Cloud)
- Indicate external interfaces (third party API's etc.)
- Indicate Data Storage components / services
- Indicate interface to machine learning models (if applicable)

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1	User Interface	How the user interacts with the application	ServiceNow Incident form / Now Platform UI
2	Application Logic-1	Client-side logic for Incident form validation and field behavior	ServiceNow Client Script (JavaScript)
3	Application Logic-2	Conditional control of Incident field state	ServiceNow UI Policy
4	Application Logic-3	Actions applied to fields when UI Policy conditions are met	ServiceNow UI Policy Actions
5	Database	Incident records and configuration data	ServiceNow platform data store
6	Cloud Database	Managed platform data persistence	ServiceNow-managed cloud data store
7	File Storage	Attachments associated with Incident records, if used	ServiceNow attachment storage
8	External API-1	External API required by the solution	None required
9	External API-2	External API required by the solution	None required
10	Machine Learning Model	Machine-learning component used by the solution	Not applicable
11	Infrastructure (Server / Cloud)	Application deployment and execution environment	ServiceNow cloud platform / SaaS

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1	Open-Source Frameworks	No separate open-source framework is required; the solution uses native ServiceNow configuration features and JavaScript.	ServiceNow platform / JavaScript
2	Security Implementations	Use authenticated ServiceNow access, roles and permissions, and platform access controls for administration.	ServiceNow roles / ACLs / authentication

S.No	Characteristics	Description	Technology
3	Scalable Architecture	Configuration is implemented within the ServiceNow platform; client-side rules can be extended to additional Incident fields without a separate application tier.	ServiceNow SaaS platform
4	Availability	The solution is hosted within the ServiceNow instance, so the configured behavior is available with the platform service.	ServiceNow cloud platform
5	Performance	Client-side validation and UI Policy behavior execute on the form and reduce unnecessary server-side processing for simple field rules.	Client Script / UI Policy
