

Project Design Phase
Proposed Solution Template

Date	03 October 2026
Team ID	SWTID-2026-2035
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	In the ServiceNow Incident form, users can face inconsistent field behavior or miss required information because field rules are not always context-aware.
2	Idea / Solution description	Configure Incident UI Policies to dynamically control field visibility, mandatory status, and read-only behavior, and use Client Scripts for targeted client-side validation or field updates.
3	Novelty / Uniqueness	The solution combines declarative UI Policies with focused Client Scripts so common field behavior is handled through configuration while custom client-side logic is used only where required.
4	Social Impact / Customer Satisfaction	Provides a clearer Incident entry experience, reduces incomplete or inconsistent submissions, and gives service desk users immediate feedback before form submission.
5	Business Model (Revenue Model)	The solution uses the existing ServiceNow platform and does not require a separate product. Business value comes from reduced manual correction, better data quality, and improved service-desk efficiency.
6	Scalability of the Solution	Rules can be extended to additional Incident fields and scenarios, and the same pattern can be reused for other ServiceNow forms while keeping each policy/script modular and testable.
