

Functional & Performance Testing Template

Functional & Performance Test – ServiceNow Incident

Date	03 October 2026
Team ID	SWTID-2026-2035
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Incident Short Description Validation	Open Incident form and enter valid/blank/invalid Short Description values.	Valid text is accepted; required-field validation prevents submission when blank.	Passed – valid text accepted and blank required input was handled by validation.	Pass
FT-02	Priority / Impact / Urgency Validation	Enter valid and boundary values for Impact and Urgency and observe Priority behavior.	Valid values are accepted and configured field behavior is applied correctly.	Passed – valid selections accepted and configured priority behavior observed.	Pass
FT-03	Client Script Execution	Open/create an Incident and perform the action that triggers the configured Client Script.	Client-side field behavior occurs immediately without a page reload.	Passed – configured client-side behavior executed as intended.	Pass
FT-04	UI Policy Application	Change the Incident form state/condition that activates the UI Policy and inspect affected fields.	Configured field visibility, mandatory state, or read-only state changes correctly.	Passed – UI Policy condition applied the configured field behavior.	Pass
PT-01	Incident Form Response Time	Open the Incident form and trigger the configured client-side behavior while observing response time.	Response should occur within the expected interactive range; no noticeable blocking delay.	Passed – response was immediate/ within the expected interactive range.	Pass

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
PT-02	Repeated Form Interaction Test	Perform repeated Incident field changes and trigger the Client Script/UI Policy multiple times.	Repeated interactions should remain responsive without script errors or degraded behavior.	Passed – repeated interactions remained responsive with no observed script failure.	Pass
PT-03	Incident Form Load / Stability Test	Open and refresh the Incident form repeatedly and verify configured behavior after each load.	Form should load successfully and configured Client Script/UI Policy behavior should remain stable.	Passed – form loaded successfully and configured behavior remained stable.	Pass
